The Human Project | The 13th Stage

The Corrective Research Institute

Positioned at the heart of the HUMAN Project, the 13th stage marks a pivotal moment in the development of this visionary endeavor. Central to this stage is the establishment of The Corrective Research Institute, an essential component in advancing the project toward its ultimate goal: the creation of OMODROM, a utopian mega-aggregate dedicated to human correction.

The Corrective Research Institute is founded on the theory of human vibration, exploring intricate dimensions of human existence. Its research spans complex studies of human nature, the analysis of human waves, and the examination of ancient cultures. The Institute serves as a technological provider for OMODROM while also conducting precise measurements of human factors such as happiness, kindness, faith, indifference, fear, and rage. Vibrational patterns in the OXOYOZ human system are meticulously assessed, accompanied by multi-level corrective processes aimed at refining and harmonizing human potential.

On September 24, 2024, the Institute officially began its journey by securing its first space at 17 Calea Vitan, Bucharest. Simultaneously, the 13th stage of the HUMAN Project is inaugurated at Catinca Tăbăcaru Gallery in Bucharest, where key conceptual frameworks are introduced.

Among the highlights of this stage is the OXOYOZ human system model, defined by three axes—male, female, and bestiary—each with six distinct categories. These categories embody the multifaceted nature of human and non-human archetypes, structured within a hexagonal system encompassing notions of stability, mobility, violence, invisibility, impossibility, and mixture.

Another focus lies in the classification of human waves, analyzed through six human factors and represented by a blueprint that maps waves across three axes. These axes capture wave types (vertical, horizontal, diagonal, circular, dust, chaotic), behaviors (deposit, gravitate, swing, transmission, reflection, scatter), and characteristics (amplitude, time, distance, velocity, momentum, energy).

In its current phase, The Corrective Research Institute offers a unique and transformative opportunity for individuals to undergo personalized analysis based on the six human factors. This process promises a profound exploration of one's inner dynamics and alignment within the larger system, embodying the ambitious vision of the HUMAN Project.
